Ans. Acetic acid dissociates to produce one $H^+(aq)$ ion per molecule and hence its basicity is one. $CH_3COOH + H_2O$

Magnesium hydroxide reacts completely with $2H^+(aq)$ ions of an acid to form salt and water, therefore its acidity is 2.

Acids give citrus fruit its sour taste, while bases such as ammonia are found in many types of cleaners. Salts are a product of the reaction between an acid and a base. A common method used to determine an acid or a base is a litmus test, but there are other characteristics that can help you identify acids, bases and salts.
