Linking is helpful if the text is the same in all the documents, and when the text needs to be updated. This is a very specific scenario, but one that can save a lot of time. For example, 20 Microsoft Word documents that are set up to print 20 sheets of address labels, and each page has dozens of labels.

How to Use Linked Text to Update Word Docs

Margins should be used to create space between elements. Padding should be used to create space between the edge of an element and its own contents. Since we want to create space between the text and the image, placing a margin on the image is the right way to go. Using CSS classes provides another benefit, too — we can distinguish between images placed on the right and images placed on the left, and set appropriate margins on only the side that is needed.
