Concepts in Pharmacogenomics by Martin M. Zdanowicz

The new science of pharmacogenomics aims to understand how an individual's genetic composition affects his/her response to a specific drug or class of drugs. By studying such characteristics as drug metabolizing enzymes, drug transporter activity, and receptor sensitivity, a pharmacist is better able to prescribe the right drug the first time. If you are pharmacist, resident, or student ...

details of relevant clinical applications and related issues.

Concepts in Pharmacogenomics

Several factors determine whether an agent is teratogenic, including the gestational timing of the exposure, as well as the dose, route and nature of the agent itself. We review the general concepts of teratogenesis, as well as known genetic susceptibilities to teratogenic effects, with a special focus on antiepileptic drugs.
