The California State Legislature has passed a bill that further restricts environmental marketing claims for plastic products. AB 2287 would expand restrictions on plastic degradability claims by eliminating the option of marine degradable claims, although it still permits compostability claims that comply with state requirements. Thermoset polymers, found in car parts and electrical appliances, have to be durable and heat-resistant, but typically cannot be easily recycled or broken down after use. MIT chemists have now developed a way to modify thermoset plastics that allows them to be more easily broken down without compromising their mechanical strength.
