Abstract A rotary shouldered pin and box connection in an earth boring drill string is modified by eliminating some threads of the box to form a cylindrical portion and similarly cutting away some threads on the outer end of a pin to form a cylindrical portion. A sleeve is positioned in the box cylindrical portion to receive the pin end, with the result that bending

API connections go under many names: Regular; IF (Internal Flush) FH (Full Hole) NC (Numeric Connection). These are single shoulder connections: They only have one torque shoulder on both pin and box. Premium connections. Premium connections are like cell phone chargers. They come in different shapes and sizes from the many competing factories.
