1. Introduction. The pipes have been extensively applied in various engineering fields used as common devices containing and conveying fluid , , .By absorbing the kinetic energy of the flowing fluid, the pipe often vibrates intensely due to the fluid-structure interaction (FSI), namely self-excited vibration, which is hazardous or potentially risky for mechanical structures.

The fluid-conveying pipes made of polymer-like materials are widely applied in engineering fields. However, the fractional dynamics of fluid-solid interaction remain unknown. In this work, the fractional dynamics of the pipes subjected to the excitation of supporting foundation are studied. A new nonlinear, fractional-order dynamic model is presented.
